I'm LY HOA NAM

Senior Frontend Engineer with 6+ years of experience building and scaling production web applications with React/Next.js (ts) and Vue/Nuxt. Strong in frontend architecture, performance optimization, and maintainable UI systems. Proactive collaborator and a trusted reviewer/mentor who helps teams ship reliably and improve code quality.

FRONT-END DEVELOPER

lyhoanam@gmail.com 0338463252 TP. HCM

TECHNICAL SKILLS

- **Frameworks**: React, Next.js, Vue, Nuxt, Preact, TanStack Router / TanStack Start, React Router
- **Languages**: TypeScript, JavaScript, HTML, SCSS, SQL, Go (Intermediate)
- **UI & Design Systems:** Tailwind CSS, Ant Design, shadcn/ui, Storybook, Ladle
- **State & Data:** TanStack Query, Redux Toolkit, Zustand, Jotai, Pinia
- **Testing & Quality:** Playwright, Vitest, Jest;
- **Build Tooling & Bundlers:** Vite, Webpack, Rollup
- **Code Quality & Standards:** ESLint, Biome, Prettier; architecture standards; code review guidelines
- **Performance:** Lighthouse, Chrome DevTools profiling, bundle analysis
- **Developer Tools:** Git, VS Code, Copilot, Cline, n8n, Figma, Adobe Illustrator

PROFESSIONAL SKILLS

- **Frontend ownership:** architecture decisions, standards, and delivery accountability across the product surface area
- **Mentorship:** Mentored and ramped up engineers through onboarding plans, pairing, and coaching; ran monthly workshops
- **Cross-functional delivery:** Estimate and Break down scope and collaborate with other teams to de-risk execution and ship on a reliable cadence.
- **Documentation:** Authored and maintained engineering documentation from beginner to advanced level across the frontend team and broader organization.

EDUCATION

University of Information Technology (UIT) - HCM VNU
Major: Bachelor of Information Systems (2015-2019) (2.87/4)

WORK EXPERIENCE

Tool Help Company (Internal Tools / Frontend Platform Enablement)

from problem discovery to implementation (2022-2026)

- **Built from scratch:** Chrome Extension to upload image/video attachments to S3 instead of local backlog storage.
- **0 → 1 delivery:** Chrome Extension to migrate Jira → Backlog with auto-translation, reducing manual rewrite effort.
- **End-to-end ownership:** Company New Tab Chrome Extension aggregating announcements, news, and internal tools/links.
- **Copilot instruction standard:** Defined and rolled out standards to improve consistency and reduce rework.
- **Frontend Knowledge Library:** Built a searchable (patterns, runbooks, pitfalls).
- **Teq-superlate** : Key contributed to a npm scaffolder for React/Vue/Next/Nuxt with standard structure and full options quality gates (lint, biome,...)

(10/2024-present)

Project: CMS (Vite + React) — Collaboration with Japanese Engineers

senior developer / frontend team leader

- **JP collaboration:** Established a new cross-border delivery model as one of the first engineers collaborating directly with the Japan team; built trust and working agreements that enabled the company to staff more JP-facing projects from the local group.
- **Delivered fintech/CIC features:** Worked with a 2–3 person squad to clarify vague user stories, break down scope, and ship on a weekly release cadence.
- **Solved critical UX/performance issue:** Fixed a long-standing scrolling/UX architecture problem and reduced key technical debt, stabilizing future feature development.

(3/2024-10/2024)

Project: Vue + Nuxt Application (Team Enablement + Production Delivery)

senior developer / frontend team leader

- **Team enablement:** coached 3 freshers (new to Vue/Nuxt) to production readiness through pairing, learning plans, and review-driven feedback
- **Project foundation:** Bootstrapped the Nuxt foundation (architecture, conventions, reusable modules) and introduced Storybook
- **SSO implementation:** Delivered SSO login and integration, reducing auth-related support issues.
- **Maintainable patterns:** Enforced Atomic Design and standardized API patterns (shared hooks / Nuxt useFetch for SSR+CSR), cutting duplicated data-fetching logic.
- **Release workflow:** Added deploy/notification tooling to improve release visibility and reduce coordination overhead.

WORK EXPERIENCE

(10/2021-9/2024)

Project: Next.js Application (Large-scale Responsive UI)

senior developer / frontend team leader

- **Led a 7-engineer team** delivering a large responsive web application; introduced shared layout/component patterns that kept the UI consistent across 100+ pages and improved development parallelization.
- **Delivered a responsive system at scale (mobile → desktop)** with reusable components and guidelines, reducing page-level styling divergence and speeding up new page delivery
- **Built a custom NextAuth-based** cross-site authentication solution, enabling single login across multiple sites
- **Improved performance score from ~50 → ~80 (**e.g., Lighthouse / Core Web Vitals proxy) by driving targeted optimizations—bundle/code-splitting, image optimization, caching strategy, route-level loading states, and eliminating render bottlenecks via profiling—resulting in faster page loads and fewer performance-related regressions.

(4/2024-12/2024)

Project: Webpack + React Micro-Frontend Platform

junior developer

- Contributed to designing and implementing a **micro-frontend architecture** via webpack (most modern at that time), enabling independent deployability across frontend modules and reducing cross-team coupling as the product scaled.
- **Owned end-to-end delivery of a "Social Feed" feature** (post status / activity updates) inside a simulated Forex trading application—driving requirements clarification, component design, state/data flow, and production rollout.

(2024-2026)

Project: Marketing Landing Pages (small projects)

progressed from fresher to senior developer

- **Built high-performance landing pages with creative, interactive animations** to support marketing campaigns and product launches, translating designs into responsive, production-quality UI.
- **Optimized animation smoothness and load performance** applying lazy-loading/ code-splitting—improving perceived speed and maintaining strong Lighthouse performance on mobile.
- **Ensured SEO and accessibility readiness** (semantic HTML, metadata, performance best practices), helping landing pages rank and convert effectively.
